SUBJECT INDEX

Acid digestion methods
  for petroleum products 127
  for solid fuels/ashes 146
Acid dissolution methods for solids 142
Acid/salt matrix interferences, corrections for 156
Ammonium pyrrolidine dithiocarbamate (APDC) 52, 59–61
Ash fusion methods 147
ATR-IR spectroscopy 353
ATR-UV spectroscopy 353
ATR-VIS spectroscopy 353

Capillary arc (DC) plasma 3
Capillary vibration induced by laser (CVL) 288
Capillary zone electrophoresis (CZE) 288
Carboxymethylated polyethyleneimine-polymethylene polyphenylene isocyanate (CPPI) 52, 60, 61, 63, 64
Cascade dilution 195
Celluloses 53
Chelating extraction agents 50, 52
Chelating extraction systems 60
Chelating ion exchange resins 50
Chelating resins 49, 53, 65
Chemical species, measurement and assignment of 270
Chemiluminescence reaction 479
Chloride ion in aqueous samples 324
Chlorinated purgeable organic compounds 330
Chlorine in water 324
Chromatograph detectors 261
Chromatography 287

Data acquisition and processing systems (DAPS) 386
Decomposition automation 84
Decomposition procedures 83
Digestion procedures 82
Direct analysis methods 150
Direct current plasma (DCP)
  historical development 161
  in geochemical analysis 161
  selected applications 164
  selected fundamental papers 163
  spectrometry 111
Direct current plasma-optical emission spectrometry (DCP-OES) 33
Direct dilution of petroleum products 126
Donnan dialysis 211
Dry ashing technique for solids 141

Electron-beam-boosted glow discharge lamp 472
Electronic dilution 195
Electrophoresis 287
Electrothermal atomic absorption analysis (ETAAA) 201–3, 409
  atom residence time in analytical zone 423
  chemical transformations in sample during vaporization 426
  composition of atmosphere in analytical zone 429
  composition of graphite furnace atmosphere 412
  composition of vapor in boundary layer 410
  effect of atmospheric composition on vaporization 429
  effect of sample composition on element vaporization 428
  experimental setup for detection of acetylides 420
  interaction of metals with substrate during vaporization process 418
  kinetic limitations of quasi-equilibrium theory 413
  metal vapor diffusion through graphite 424
  metal vapor pressure 413
  metal vaporization 413
  molecular spectra of vapors in equilibrium with condensed phase of substance under study 430
  particle transport in analytical zone 411
  quasi-equilibrium theory of atomization 410
  recording of molecular spectra at high temperatures 432
  separation of vaporization and vapor dissociation processes 426
  spatial distribution of particles in tube furnace during stationary vaporization 411
  thermal effect of vaporization 413
  vapor transport 423
Electrothermal atomization (ETA) 469
Electrothermal vaporization-atomic absorption spectrometry (ETV-AAS) 33
Elevated pressure-assisted methods 142
Ethanol determination in gasohol 331
Extended X-ray absorption fine structure (EXAFS) 292
Extraction discharge 482

FANES 469, 476
FAPES 477
FIAtron SHS-300 129
Flame atomic absorption spectrometry (FAAS) 23, 201
Flame/furnace infrared emission (FIRE) spectrometry 303
  analytical applications 321
  as compound-specific detector for determination of ethanol in gasohol 331
  as detector for high-pressure liquid chromatography 329
  as element-specific detector for gas chromatography 326
  background subtraction 319
  collection optics 313
  combustion flames 309
  dispersive radiometers 317
  electrically-heated furnaces 310
  emission source 308
  field of view 313
  future prospects 332
  infrared detectors 318
  instrumentation 308
  interference filters 315
  laboratory applications 304
  modulation 314
  noise 307
  noise reduction techniques 318

optical materials 313
phase-sensitive detection 319
signal irradiance 306
signal-to-noise ratio (SNR) 308
solid angle considerations 314
theory 304
wavelength isolation 314
Flow-injection analysis (FIA) 235
Flow-injection atomic spectrometry (FIAS) 169
basic characteristics 170
basic concepts 169
calibration strategies 222
combined procedures 214
compensation fluid 188
concentration-time profile 171
continuous dilution 222
controlled dispersion analysis 185
development of 172
equipment 174
flame chemistry 219
future developments 226
high dissolved solid content 182
indirect methods 218
injection valves 184
interference effects 186
liquid–liquid extraction 197, 219
manifold design 191
matrix addition 224
merging zones 192, 223
microsampling 175
nature of the solvent 186
nebulizer efficiency 187
nebulizer uptake rate control 189
overlapping peaks 192
peak area 195
peak area measurement 188
peak parameters 223
peak width 194
precipitation reactions 221
real samples 174
reverse flow injection 223
sample types 175
segmented carrier streams 189
serial dilutions 222
solid phase extraction 200, 206
solid phase reaction 219
speciation studies 216
standard additions method 223
tandem injection 196
time-based methods 194
useful working range 191
vapor generation 212
variable injection volume 194
variable tube dimensions 192
viscosity effects 183
zone penetration method 223
Flow-injection on-line column preconcentration in atomic spectrometry 235
activated alumina 251
and liquid chromatography 236
applications 251
C_{18} bonded silica gel and polymer sorbents 250
chelating ion-exchangers 249
column designs 242
column packings 249
column washing 243
concentration efficiency (CE) 237
consumptive index (CI) 238
dispersion control 238
dispersion effects in atomic spectrometric detectors 239
dispersion in eluate transport 241
dispersion in sample loading 239
dispersion in sorption and elution 240
elution 244
enrichment factor (EF) 237
evaluation of 237
fundamental aspects 236
future trends 257
injection valve 245
manifold designs 245
manifolds for flame AA and ICP spectrometry 245
manifolds for graphite furnace AAS 247
manifolds for hydride generation and cold vapour AAS 247
practical aspects 241
retention efficiency 238
sample loading 241
strongly basic anion exchangers 251
Fluorescence spectrometry 263
Fourier transform infrared (FT-IR) ATR dichroism technique 353
Fourier transform infrared (FT-IR) spectroscopy 291, 316
Furnace atomic non-thermal emission spectrometry (FANES) 469, 476

Gas chromatography 262, 326
Gasohol, ethanol determination in 331
Geoanalysis
inductively coupled plasma-mass spectrometry (ICP-MS) in 3
plasma spectrochemistry in
Geochemical analysis, direct current plasma (DCP) in 161
Geochemical exploration 79
Geochemical processing of analytical data 92
Geochemical prospecting 79
Glow discharge lamps 470
Graphite furnace atomic absorption spectrometry (GFAAS) 23, 476
Graphite rod electrothermal vaporization (ETV) 55

Helium ICP (He-ICP) 483
Hexamethylene ammonium hexamethylenedithiocarbamate (HMAHMDC) 60
High performance liquid chromatography (HPLC) 167
High pressure liquid chromatography (HPLC) 329
High temperature furnace ashing (HTA) 141
Hollow anode FANES 477
Hollow cathode lamp 474
Hydride generation/DCP-AES 111
Hydride generation/ICP-AES
applications 107
detection limits 101
interelement effects 105
interferences 101
Hydride generation/ICP-AES system 98
Hydride generation techniques
advantages and disadvantages 95
covalent hydrides 96
in inductively coupled plasma-atomic emission spectrometry (ICP-AES) 95
reducing agents and sources 96
8-Hydroxyquinoline-5-sulphonic acid (SOX) 59

ICP 469, 478, 481, 482
as process monitor 438
flow control and autosampling 128
in petroleum industry 125
online process control 437
power modulated 447
ICP-AES 6, 8, 23, 46, 47, 48, 59, 60, 62, 64, 65, 79, 134, 475
background correction 155
calibration and interference corrections 86
hydride generation techniques in 95
instrumental analysis 150
instrumentation 84
multielement analysis 84
of fossil fuels and related materials 141
multielement calibration and analysis 151
multielement optimization 151
preconcentration and separation techniques 45
quality assurance and monitoring program 157
REE detection limits and chondrite values 11
reproducibility of interference calibrations 155
resolution 153
sample preparation 141
sequential simplex method 111
spectral interference corrections 152
ICP-MS 65, 201
advantages in geochemical analysis 5
as geological exploration tool 134
calibration curve 39
disadvantages in geochemical analysis 6–9
fire assay 22
in geoanalysis 3
instrumentation 34, 204
interferences 36
isotope dilution 40
mass bias correction 135
monitoring of environmentally important elements 139
Pb isotopes 25
performance characteristics 5
preconcentration and separation techniques 45
quantitative analysis 39
REE detection limits and chondrite values 11
sample preparation 36, 135
semiquantitative analysis 38
system schematic 4
trace elements 9
in Ca-rich samples 25
trace metals in water resource monitoring programs 33
ICP-OES 33, 34, 196, 201, 437
Imino-diacetic-acid-ethyl-cellulose (IDAEC) 52, 60
Inductively coupled plasma. *See* ICP
Instrumental neutron activation analysis (INAA) 23
Ion bombardment-glow discharge 483
Ion exchange chromatography 49
Ion exchange resins 65
Isotope dilution analysis 31
Isotope ratio determination 27

Kerr effect 379, 380

Lanthanides
absorption 338
absorption methods 339
co-luminescence effect 346
complexation methods 340
definition 337
determination in solutions 337
direct absorption of ions 339
emission 338
excitation of ions via energy transfer 341
fluorescence enhancement of ligand 347
fluorescent labelling 348
fluorimetric methods 341
intermolecular energy transfer 344
intramolecular energy transfer 341
laser-induced fluorescence 341
micellar effect 345
micellar solutions 343
organic chelates 347
photoacoustic spectroscopy 340
properties of 337
solvent extraction using crown ethers 345
spectral properties 338
synergistic agents 343
thermal lens spectrometry 339
Laser atomization 478
Laser enhanced ionization (LEI) 461
Laser induced breakdown spectrometry (LIBS) 441
Laser induced fluorescence (LIF) 461
Laser induced plasma 478, 479
Liquid chromatography 266
using plasma spectrometry as specific element detector 130
Lithium metaborate (LMB) 147
Lithium metaborate-tetraborate fusion 59
Lithium tetraborate (LTB) 147
Low temperature oxygen plasma ashing (LTA) 141–2

Metastable transfer emission spectroscopy (MTES) 475
Methyl isobutyl ketone (MIBK) 48
4-Methyl pentan-2-one (MIBK) 211
Microarc atomizer 480
Microwave induced plasma (MIP) 3, 473, 474, 478, 480
Microwave-assisted methods for solids 142
MIP-MIP 481
Mn-nodules, trace elements in 27
Molecular non-thermal excitation spectrometry (MONES) 477
Molecular spectroscopic methods for determination of lanthanides in solutions 337
Multielement analysis with ICP-AES 84
Multiphoton ionization spectrometry 263

Nd:YAG laser 273
NIOSH-NBS freeze-dried urine 55
NIST isotope standards 135
Nitric acid, wet ashing with 128
Nondestructive analyses, photoacoustic spectroscopy 289

Os isotope ratios 29
Oscillatory electric birefringence (OEB) 379
background 380
characterization of polymer solutions 379
data acquisition and processing systems (DAPS) 386
errors due to amplitude modulation 392
experimental apparatus 382

factors influencing selection of modulation frequency 391
form of optical signal 385
samples and solutions 396, 403
solvent relaxation, in polymer solutions 394
zero birefringence solvents 402
Oxygen bomb combustion for liquid and solid fuels 149

Pb isotope ratios 30
Pb mineral concentrates
isotope ratio determination 22
rapid isotope ratio determination 23
PC-ICP
general component layout 438
in aluminium alloy manufacturing 444
in coal gasification 442
incinerator stack gas monitoring 441
industrial effluent monitoring 440
PDTC 59, 63
Petroleum industry
analytical results of crude samples 136
current analytical procedures 126
inductively coupled plasma (ICP) in 125
Photoacoustic spectrometry, single microparticle 284
Photoacoustic spectroscopy, nondestructive analyses 289
Photothermal deflection, single microparticle analysis 284
Photothermal spectroscopy
analytical and chemometric applications 275
applications 283
biological substances 293
chemometric applications 293
condensed matters 294
depth profiling 290
instrumentation 275, 279, 296
methodology 296
microanalyses 284
photothermal effect in condensed phases 276
spectroanalytical and chemometric informations 278
spectroanalytical applications 291
spectrochemical applications 293
ultrafast method 297
ultrafine particle detection by laser breakdown acoustic effect 286
ultratrace analyses and applications 281
Plasma spectrochemistry, in geoanalysis
Platinum group elements (PGE), determination by fire assay ICP-MS 22
Poly(acrylamidoxime) (PAAO) 51, 56
Polyatomic ion interferences 15
Polycyclic aromatic hydrocarbons (PAHs) 261
Poly(dithiocarbamate) (PDTC) 51, 54, 56–8
Polymer solutions
oscillatory electric birefringence (OEB), characterization of 379
solvent relaxation in 394
Polymers, preparation of 128
Power modulated analytical inductively coupled plasma
analytical applications 459
as diagnostic tool 447
diagnostic studies with pulsed modulation 450
diagnostic studies with sinusoidal modulation 449
precedents with other discharges 447
pulse-interrupted modulation 450
types of modulation 449
Power modulated analytical inductively coupled plasma spectroscopy 447
Precipitation for preconcentration and separation 205
Precipitation/flotation techniques 46
Preconcentration techniques 45, 65, 150
miscellaneous 49
on-line 61, 63, 69, 196
solid samples, fusions 47
Process control ICP. *See* PC-ICP
Purgeable organic compounds (POCs) 323

Quality assurance and monitoring 157
Quality control
plasma conditions 88
procedures 86

Radiogenic isotope ratio determination 28
Rare-gas ion sputtering 470, 474
Reduced-pressure afterglow 482
REEs
calibration curves 12
determination in silicate rocks and minerals 10–20
general spectral characteristics 11
in SY-3 at 0.1% 15
in W-1 at 0.5% 15
mineral analysis 20
spectra in geological materials 13
Resonance ionization mass spectrometry (RIMS) 464
RF arc-inductively coupled plasma 483
Rock digestion 128
Round robin analysis 129

Sample preparation 82
SARA analysis 132–4
SEC-ICP 131
Separation techniques 45, 65, 150
on-line 61, 69, 196
Sequential simplex method 111
Sequential simplex optimization 112
applications 118
Silicate rocks and minerals, determination of REEs in 10–20
Size-exclusion chromatography (SEC) 68, 131
Sludge digestion 128
Sodium diethyldithiocarbamate (DDTC) 52
Solvent extraction methods 48
on-line 64
Solvent relaxation, in polymer solutions 394
Sorbent extraction methods, on-line 65
Spectral similarity, evaluation of 271
Sputtered neutral MS (SNMS) 464
Stable isotope ratio determination 28
Sulfated ash 127
technique for liquid fuels/resids/polymers 148
Supercritical fluid chromatography 268
Supersonic jet spectrometry 261
exciting source 272
sensitivity 272
spectral congestion 272
SY-3 spectra 16
SYMISOL 84, 90

Tandem sources
active 470
active versus passive 468
advantages of 464
categorization 466
characterization 469
definition 463
differential pressure versus identical pressure 468
for analytical spectrometry 463
graphical representation 464
graphite-furnace-based 475
integrated versus separated 467
literature review 470
mathematical modeling 469
passive 468, 482
pre-vaporization techniques 484
radiation-induced phenomena 483
Thin-layer chromatography 269
Time-resolved TIRF spectroscopy 353, 354
absorbing sample 356
angular spectrum 372
applications 363
concentration gradient in SPUU films 372
depth profile 372
dynamics in PHST films 365
dynamics of SPUU films 371
effect of gas environment in baking process 368
future perspectives 375
homogeneous depth profile 373
inhomogeneous depth profile 374
inhomogeneous distribution of pyrene in PHST films 364
instrumentation 362
internal reflection element 361
materials and film preparation 363, 369
materials and sample preparation 372
non-absorbing sample 355
PHST films 363
polarity of PHST films 367
polarity of SPUU films 370
principles 355
SPUU films 369
Total inorganic carbon (TIC) 321
Total internal reflection fluorescence (TIRF) spectroscopy. *See* Time-resolved TIRF spectroscopy
Trace elements in Mn-nodules 27
Trace metals in water resource monitoring samples 33

Ultraviolet/visible spectrometry 261

Water resource monitoring samples, trace metals in 33
Wet ashing with nitric acid 128

X-ray fluorescence spectrometry 82, 438
X-ray photoacoustic spectrometry 292
X-ray spectrometry (XRS) 46

Zero birefringence solvents 402
